Summary

Computer Science undergraduate (GPA 9.11/10) and SAP Certified Data Analyst who builds data analytics, machine learning, and LLM-powered applications in Python and SQL. Experienced with RAG pipelines, LangGraph agents, FastAPI, SQL star-schema modeling, predictive analytics, and Streamlit dashboards.

Technical Skills

Languages: Python, SQL (CTEs, Window Functions, Joins, Aggregations), C
AI & Machine Learning: RAG, LLMs, LangChain, LangGraph, Ollama, Whisper, FAISS, Sentence Transformers, Scikit-learn, Feature Engineering, Gradient Boosting, XGBoost, LightGBM, K-Means, SHAP
Data Analytics: Pandas, NumPy, EDA, Data Cleaning, ETL, Data Validation, Statistical Analysis, KPI Reporting, Root Cause Analysis
Databases & Modeling: PostgreSQL, pgvector, MySQL, SQLite, SQLAlchemy, Star Schema, Data Modeling
BI, Backend, Cloud & Tools: Tableau, Power BI, Streamlit, Plotly, Matplotlib, FastAPI, Docker, AWS (Bedrock), Git, GitHub, Jupyter, Google Colab

Projects

MedGraph – Agentic Clinical Document Intelligence GitHub
Python, LangGraph, LangChain, Pydantic v2, FastAPI, PostgreSQL + pgvector, Docker

- Built a LangGraph state-machine agent (scrub, classify, extract, retrieve, synthesize, verify, refuse) that answers questions over a public healthcare-policy and drug-label corpus.
- Added a verification step and refusal path so the agent declines to answer when the corpus cannot support a response.
- Implemented typed models with Pydantic v2, APIs with FastAPI, and vector retrieval on PostgreSQL with pgvector, containerized with Docker.

AI Video Summarizer Pro GitHub
Python, Streamlit, Ollama (Llama 3 / Mistral), Whisper, FAISS, Sentence Transformers

- Built a Streamlit app that runs local LLMs through Ollama to generate summaries, key points, ELI5 explanations, and timestamped section summaries from YouTube videos.
- Implemented a RAG chat pipeline with Sentence Transformers embeddings and FAISS vector search for questions about video content.
- Added a Whisper speech-to-text fallback for videos without captions, multi-language output, and caching for faster repeat runs.

Supply Chain Disruption Intelligence Platform GitHub | Live Demo
SQL (SQLite), Python, Pandas, Scikit-learn, Streamlit, Plotly

- Designed a 6-table SQLite star schema (78K+ records, 5,000+ shipments) and wrote 15 SQL queries using CTEs and window functions (LAG, NTILE, RANK) for delivery, supplier, and inventory KPIs.
- Ran data validation, EDA, and root-cause analysis in Python, identifying a 29.8% delay rate; built and deployed a 4-page Streamlit/Plotly dashboard with shipment risk scores and supplier scorecards.
- Developed a Gradient Boosting delay classifier (AUC 0.81) and severity model (MAE ∼11 days); risk-scored 15 suppliers, quantifying $11.4M value at risk and $6M annual savings in a simulated business case (synthetic data).

Experience

Software Developer Intern – Tanituts, Chandigarh Jun 2025 – Jul 2025

- Developed and shipped job-listing, application, search, and authentication modules for a live job portal in a cross-functional Agile team.
- Executed debugging, testing, and data-validation cycles and documented changes to deliver production-ready features.

Education

SRM Institute of Science and Technology, Chennai, India Expected Jan 2027
B.Tech, Computer Science Engineering | GPA: 9.11/10

Certifications

SAP Certified Data Analyst, SAP Analytics Cloud (Apr 2026) | NPTEL Elite Certification, Business Intelligence & Analytics, IIT Madras (Jan–Apr 2026)
Machine Learning Specialization, DeepLearning.AI / Coursera (Mar 2026) | Deloitte Data Analytics Job Simulation, Forage (Mar 2026)
